PROFESSIONAL SUMMARY

Analytical, product-minded AI Product Manager Intern candidate with hands-on experience driving product discovery, authoring technical specifications (PRDs), evaluating LLM/RAG pipelines, and executing cross-functional product roadmaps. Proven ability to translate user needs into technical requirements, conduct qualitative/quantitative market research, and run sprint execution. Adept at bridging engineering, UX design, and data-driven business strategy in high-velocity startup environments.

CORE COMPETENCIES & TECHNICAL SKILLS

• Product Lifecycle & Strategy: Product Requirement Documents (PRDs), User Research, Competitor Analysis, Go-To-Market (GTM) Strategy, Feature Scoping, User Journey Mapping, Wireframing.
• Prioritization & Agile Methods: RICE & MoSCoW Frameworks, User Story Drafting, Acceptance Criteria, Backlog Grooming, Sprint Planning, Rapid Prototyping.
• AI Product & Data Analytics: Retrieval-Augmented Generation (RAG), Prompt Evals & System Prompts, Latency vs. Accuracy Trade-offs, SQL, Python, React, JIRA , Notion, Github, Google Sheets (Pivot Tables, Metrics Dashboards).

PRODUCT EXPERIENCE & LEADERSHIP

FOUNDER & AI Product Lead | Divergix Labs (Project PDIS) **September 2026 – Present**

• Led zero-to-one product discovery and PRD scoping for Project PDIS (Personal Decision Intelligence Simulation), an agentic AI framework for strategic decision modeling.
• Recruited and managed cross-functional engineering talent; executed 2-week Agile sprint cycles and prioritized backlogs using RICE scoring to accelerate MVP delivery.
• Conducted 50+ user research sessions and competitor audits to define system prompt guardrails, user personas, and core evaluation metrics (evals).
• Defined standard engineering SOPs and acceptance criteria, reducing sprint bottleneck delays and code iteration cycles by 35%.

BACKEND AI PRODUCT ENGINEER INTERN | FlyRank.AI **July – September 2026**

Owned feature requirements and architectural scoping for microRAG, a high-throughput Retrieval-Augmented Generation engine powered by FastAPI and SQLite FTS5 search.
• Benchmarked model performance across multiple LLM API providers to analyze latency, token cost trade-offs, and retrieval accuracy, decreasing query latency below 800ms.
• Synthesized technical performance metrics into executive dashboards and product specs for senior engineering and business leadership.

KEY PROJECTS & ACKNOWLEDGEMENTS

• Global Economic Times Gen AI Hackathon (2026): Shortlisted among Top 129 Finalist Teams out of 55,000+ national applicant teams after pitching a strategic GenAI solution.
• Google Big Code Challenge (2026): Qualified for Round 1 after scoring 14/18 in the nation-wide technical qualifier assessment.
• Open-Source Framework Contributor (2026): Authored accepted Pull Requests (PR #3888, PR #3886) to the Mesa Python framework, modernizing type annotations and resolving performance deprecation warnings.

EDUCATION - NDIAN INSTITUTE OF TECHNOLOGY MADRAS (IIT MADRAS

Bachelor of Science (BS) in Data Science and Applications | 2025 – 2029
• Relevant Coursework: Data Structures & Algorithms, Application Development, Database Management Systems (DBMS).

PROJECTS & PORTFOLIO

Brofessor.AI -AI-Powered Personal Tutoring Product

• Spearheaded product vision and end-to-end development of a context-aware AI learning platform built with React.js, Node.js, Express, MongoDB, and document-parsing RAG.
• Conducted user feedback loops with 30+ students to iterate on prompt persona engines ("bro" tone of voice), achieving a 40% increase in weekly active user retention.
• Defined feature backlogs and telemetry event tracking to measure document processing speeds and query resolution success rates.

Pro.Cafe - Full-Stack Interactive Web Product

• Scoped user flow requirements and built an interactive web platform utilizing React.js, Framer Motion, and Tailwind CSS.
• Executed UX wireframing and user interface optimizations, resulting in a 25% increase in average session duration and smoother funnel conversions.
